

FAA Equipment Upgrade May Impact Operators

On Friday, 23 Jul 10 at 12:01am EDT., the FAA will [commence the](#) transfer of software applications that run on servers at the Air Traffic Control System Command Center (ATCSCC) to new servers located at the Traffic Flow Management Production Center (TPC) in Atlantic City, NJ. The transfer is in preparation for the ATCSCC's relocation to a new command center in Warrenton, VA in early 2011. During this move, operators will not be able to acquire e-STMP or e-CVRS reservations and will lose access to a number of other FAA operational web pages. Once the transition is complete, all pages will resume normal operation. The transition could be delayed or canceled if inclement weather develops. For more information, contact the NBAA GA Desk at gadesk@nbaa.org.
